(833) 497-7370

Dear Valued Capital Rx Member,

Valisure is the first online Analytical Pharmacy that chemically tests every batch of every medication we sell, and we deliver it to you with a certificate of analysis specifying important chemical properties. While Valisure carries most medications, there are a few drugs that we are unable to dispense detailed below.

### Schedule II Controlled Substances

Schedule II drugs are highly regulated and due to these DEA regulations, we are unable to fill Schedule II prescriptions at this time.

#### Examples of Schedule II drugs include:

hydromorphone (Dilaudid)  
methadone (Dolophine)  
meperidine (Demerol)  
oxycodone (OxyContin, Percocet)  
fentanyl (Sublimaze, Duragesic)

#### Other Schedule II narcotics include:

morphine  
opium  
codeine  
hydrocodone

### Biologics

Many biologics must be kept within strict temperature ranges in order to arrive at their destinations fully potent and are not recommended to be purchased by mail order. Furthermore, the complex chemical nature of biologics make them particularly difficult to analyze. Because of this, Valisure does not currently sell these medications.

#### Examples of Biologics include:

Avastin (Bevacizumab)  
Avonex (Interferon beta-1a)  
Enbrel (Etanercept)  
Herceptin (Trastuzumab)  
Humira (Adalimumab)  
Insulin

Lantus (Insulin glargine injection)  
Lucentis (Ranibizumab)  
Neulasta (Pegfilgrastim)  
Remicade (Infliximab)  
Rituxan (rituximab)

### Valisure Analysis

Valisure currently rejects over 10% of the medication batches we test. These medications could be rejected or put on hold for further investigation for a number of reasons: incorrect dosage, inactive ingredients, improper dissolution, contamination by a known impurity, or for potentially misleading marketing claims.

Examples of drugs that have not passed Valisure's analysis: "Rapid release" acetaminophen products that are actually [slower to dissolve](#) than the cheaper standard pills. Certain ibuprofen products that [do not dissolve](#) when tested in real world conditions.

Should you have any questions, please feel free to call us at 844-792-4325.

Sincerely,

Paul Barry, MBA, RPH

IMPORTANT NOTICE: Read the instructions and any medication guide that came with your medicine, use the medicine as directed, and check with your health care provider if you have any questions about your medication and before changing your treatment in any way. The chart above contains results from an analytic chemistry analysis performed on a subset of pills from the same batch or lot as the pills provided to you. The subset was designed to be representative of the entire batch or lot. The specific pills you received were not analyzed and an analysis of your pills could yield different results. These results: (1) are not medical advice, (2) are not intended to be a statement, claim or indication of efficacy or suitability of the pills provided to you, (3) do not describe any particular characteristic (or lack of characteristic) beyond the specific metrics listed for the subset tested, and (4) make no claim or indication of the relative efficacy and/or suitability of your pills or the subset as compared with other subsets, batches, lots, brands, formulations, or treatments. VALISURE LLC DOES NOT MAKE, AND SPECIFICALLY DISCLAIMS, ANY REPRESENTATIONS OR WARRANTIES WITH REGARD TO THESE RESULTS AS THEY RELATE TO THE PILLS PROVIDED TO YOU, INCLUDING, WITHOUT LIMITATION, ANY EXPRESS OR IMPLIED WARRANTIES, WARRANTY OF MERCHANTABILITY, WARRANTY OF PERFORMANCE, OR WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE.
